

Fibreglass Skin Colourfastness

IDM Doors Ltd Data Sheet 2

Colours

The BS / Ral colours for the fibreglass door leaf are:-

Red	RAL 3002
Blue	BS 20C40
Green	BS 14C40
White	RAL 9016

These colour references are for **guidance purposes** only. Due to the tolerances allowed within the standards, it is recommended that any colour matching is done against samples of the product.

UV stability

Extensive UV stability tests have been undertaken on our fibreglass door leaf using **QUV** testing equipment.

The results show that effectively over a period of ten years under general atmospheric conditions the colour will not exceed a delta E of 9.
